Re: Wastewater Treatment Plant – Facilities Operation Report.

The Village's Facility treated on average 2,490,000 gallons per day in September. New York State Discharge Permit {NYS-SPDES} limits were met over the period. Below are the projects completed and other significant notes. Daily operations/maintenance activities conducted as scheduled.

Projects and significant events of record.

- Composting operation in process. 7.543 dry tons processed.
- Removed 16.5 cubic feet of grit from influent.
- Greased all equipment.
- Repaired leak in polymer system on belt press system.
- Replaced bad light bulbs around plant.
- Completed painting of inside of ferric chloride storage building.
- Paul Nowak trained WWTP personnel on new compost computer system.
- Loaded out finished compost.
- Disposed of reject compost from screening operation.
- Paul Nowak worked on phone system.
- Replaced failed sump pump in thickener building.
- Replaced broken air line to airlift #5 with PVC pipe.
- Compost auggie truck repaired by DPW.
- Calibrated on-line influent and effluent pH probes.
- Installed rebuilt back-up air blowers for air lift system.
- Flow meter calibrated.
- Screened finished compost for final testing.
- Painted floor in influent bar screen room.
- Replaced broken shear pin on automated bar screen.
- Made air piping repairs at compost facility.
- Stripped and waxed bathroom floor.
- Conducted weekly composite sampling for SPDES permit compliance.
